WORK EXPERIENCE

Move Industries **Remote**
Forward Deployed Engineer *October 2024 – Present*

- Built an on-chain vault integration end-to-end in Move for ecosystem partner Zoth, translating product requirements into deployable smart contracts and resolving platform-specific constraints.
- Work directly with fintech and blockchain partners across pre-sales and post-sales, scoping technical requirements, validating feasibility, and driving integrations through implementation.
- Spend approximately 75% of my time writing production code, building partner integrations and full-stack applications from requirements through deployment.
- Delivered SDK and tooling integrations with partner engineering teams, troubleshooting implementation issues and supporting production readiness.
- Act as the technical bridge between external partners and internal product and engineering teams, surfacing blockers and translating partner feedback into technical requirements.

Injective Labs **Remote**
Developer Relations Manager *February 2024 – October 2024*

- Supported developers building on Injective through technical troubleshooting, implementation guidance, documentation, and direct developer support.
- Authored developer documentation, technical tutorials, and implementation guides for platform APIs, tooling, and application development.
- Delivered technical presentations and workshops for engineering audiences at global industry events.
- Designed and ran technical hackathon programs, evaluated implementations, and used developer feedback to improve onboarding and developer experience.

Sui Foundation **Remote**
Developer Relations Engineer *January 2023 – February 2024*

- Worked directly with ecosystem developers to troubleshoot technical issues and support application onboarding on Sui.
- Created technical documentation and tutorials covering platform tooling, application development, and developer workflows.
- Presented platform capabilities and development workflows to engineering audiences at global industry events.
- Gathered recurring developer pain points and worked with internal teams to improve documentation, tooling, and onboarding.

TECHNICAL SKILLS

Languages: Rust, TypeScript, Python, Move, Solidity
Engineering: API and SDK integrations, smart contracts, full-stack development, technical troubleshooting, proof-of-concept development, developer tooling
Customer-Facing: Technical discovery, solution scoping, partner onboarding, implementation support, pre-sales and post-sales engineering

EDUCATION

Virginia Tech **Blacksburg, VA**
Bachelor of Science in Mechanical Engineering *May 2022*
